Cover Letter

2017-12-21

As you can see from my CV I have qualifications in programming in general – specifically in C (with GLib/GObject and Gtk+), but also in Java and C++ – Both from my time at University and some hobby projects I have worked on during my spare time, an example is SSTS¹.

With me you will get a hard working colleague, someone you can trust.

What I would like to work with is GLib/GObject code. It is what I find most interesting.

At the University of Skövde I studied Computer Science, what I learned there has been of utility for me, through the years

An example of how this has helped me is how software projects should be organised, file- and directory structure, but also general thinking in the field of computer science like time- and memory complexity, logic, class- and component dependencies, and so on.

With what has been said above in mind I do see myself fit like a glove for this job. We will have a fun and productive time together.

As is customary in these letters, I should tell you a bit about what I do outside of work.

I like Nordic Skating when the ice is, attend history lectures and help out with serving at Strömstad's Historical Society², and – as you probably could have guessed – I have a great interest in technology following sites like Ars Technica, HACKADAY, among other, and the journal PoC||GTFO (The International Journal of Proof of Concept or Get The Fuck Out).

Hope to hear from you soon. Preferably via phone.

Best Regards

Gustav Hartvigsson

PS: I see no problems with moving closer to the place of work if need be.
